

Team Meeting 4/21/2016

Agenda:

- Scope Mounting
- Arduino
- Expo Poster Rough Draft Layout
- Expo plan
- Tech Presentation with Pi

Scope mounting:

- Is perfect, the slow motion video doesn't show any movement of the scope.
- The numbers are very consistent.

Arduino:

- Has a nice box. Working perfectly with a push button. Just needs to add an increased delay time.
- Pressure gauge might be broke.

Expo Poster Rough Draft:

- Need to change the font – **Rockwell**.
- Layout looks good. Will change the scope mount picture to our official scope mounts with the arrows.

Expo Plans:

- Since we will have the glass, we want to go ahead and hit the fruit
- As of now will do the impact manual
- Might bring a casket of air to show the judges and NightForce Guys

Tech Presentation:

- Need to at least have Pi there.

Action Items:

Run test and figure out pressure to gforce relationship

Safety glass
